LEVEL REPORT

Square: F10, N'th
Level: fill
Site: 18KN272

Date Started: 7-14-88
Date Finished: 7-15-88

Closing depth: __________
Opening depth: __________
Screened: ✔ Screen mesh size: 3/8"

Excavated by: Supervisor: C. Nash / WM6
Crew: C. Quiros, JW

Features present or indicated: This is a dark, mottled stain, irregularly shaped, and ca. 4' N-S, ca. 1' E-W at widest points. WM6 noted possible on surface in SW corner. This clearing (located during stripping activities), stain, mottled dark brown loam

Nature of soil: surrounding matrix - orange-red clay by sand/pebbles

Samples Taken:
- Carbon
- Flotation
- Pollen
- Soil

Other: Carbon

Material recovered: Mockley shreds (one very large - see map), pwa, hammerstone, charcoal, all bones

Draw floor (over): see attached

Remarks: Site was bisected along N-S axis - baseline cut further back to south to remove large shed. Not clear if this was actually dug as a pit, or what is going on - very difficult to define edges. Some areas darker, more full of charcoal than others - underneath, stain much smaller than on surface.
